Chuck Shane and Al Alexy ; P 916-736-2888 ; F 919-451-1226**

Do you really think only schools have multi zone roof top or indoor units requiring replacements, because of the years of not knowing what to do with the old multi zone units on their roof except replacing the old parts?

Did you know 50% of the Multi zone units Seasons-4 is replacing every year are for Office Buildings, Banks, FAA Buildings, DMV Buildings and Hospitals?

Mr. Al Alexy of Tempco, Seasons-4's Northern California representative worked with Department of Motor Vehicles of California, and they came up with the most efficient specifications for all California's DMV's roof top units.

The DMV San Mateo unit is surrounded by a parapet wall. Obstructions around the unit are very critical and important for the new replacement unit to meet. Not any shelf type unit will be able to meet these requirements.

Seasons-4 provided the answer.
